## Trough feeders VPO

The VPO trough feeders are used for discharging and feeding of lumpy and grained materials into the crushers or screening equipment, conveying transportation etc.

The VPO's construction is especially designed for heavy operations with an emphasis on working in dusty conditions environment. For arctic conditions is the feeder equipped with a heater system. The amount of feed material is controlled by a frequency converter.

Minimum operation costs, which results from the balanced machine design, utilization of many years' of trough feeder operation experience and unification of parts.
